

## ***Finding your place in the Cosmos***

**Groton** 44.2277° N 72.2827° W

Giza 30.0131° N 31.2089° E (Sirius Dec -16° 42' RA 6h 45m)

Tare 14.2146 T 103.4916 Stasis -2° 30' RA 13h 38m

The two brightest stars in the Heavens are Sirius and Spica (the Seed) respectively and they are the only two specifically targeted by the

Dendera Zodiac and, when you place Sirius above Giza as the original plans called for by Osiris himself, then Spica is straight overhead of Groton, Vermont (picture below of my driveway in the form of a Sperm circa 2001 AD) where I grew up.

Exactly what the Hell are the odds of that, hey...
